

We can see in Code Listing 1 that... And compared to Code Listing 2 something else.

```
#!/usr/bin/env python3

class MyClass(MyOtherClass):
    """
    Some Docstring ()
    """
    a = 3
    b5 = -42
    q = (3, 5, j)
    SIGNAL('clicked()'),
    "A String"

#!/usr/bin/env python
#-*- coding: utf-8 -*-

class MyClass(MyOtherClass):
    """
    Some Docstring
    """
    def __init__(self):
        fruitbowl = ["pear", "peach", "banana"]
        for fruit in fruitbowl:
            print fruit
            if fruit is "pear":
                continue
            else:
                pass
        if fruitbowl is not None:
            var = True
        else:
            var = False
        a = 3
        b = -46
        c = 3.48
        someDict = {'one':1, 'two':2, 'three':3}
        aTuple = (1, 2, 3, 4, 5)
        string = "one-two=3"
        name = "Username: "
        self.button1.connect(self.button1,
            SIGNAL('clicked()'),
            self.login)
        return
```
